SUCCESS RATE

Volume by endpoint

Image rendering remains the majority of traffic, though PDF output grew fastest again this month as invoicing workloads moved across from the previous provider.

/api/html	96,412
/api/screenshot	52,880
/api/v1/templates	28,144
MCP server	6,770

Output format split

FORMAT	RENDERS	SHARE	CHANGE
PNG	141,509	76.8%	+4.1%
PDF	42,697	23.2%	+31.6%

Notes

The 11 July latency spike traces to a single customer batching 9,000 full-page captures into a four-minute window. Queue behaviour worked as designed and no requests were dropped, though it is worth revisiting whether burst guidance in the documentation is clear enough.

Two accounts crossed the enterprise threshold this month, both migrating from self-hosted headless Chrome. Both cited operational cost rather than per-render price.
